

We create intelligence from chaos

Business Analytics Professional Services

At Ergoman our **vision** is to become the recognized **leader in Business Consulting** enabled by Technology and **Business Analytics**. We believe that our mission is to help our clients to reach their potential through innovation. We co-operate with global market leaders like **IBM** and provide our clients solutions to their business problems. We combine business consulting, specialized skills, technologies and experience to respond to the new market demand.

Our experienced Business Analytics consultants have been in business for **over than 15 years** and have delivered a big number of analytics projects to different vertical industries like:

- Pharmaceuticals
- Telecom providers
- Fast moving consumer goods (FMCG)
- Retail
- Financial services & insurance
- Manufacturing &
- Government .

Each of these clients trusted our team with their business. When they succeed, we succeed and we grow.

BUSINESS INTELLIGENCE

The success or failure of every business is driven by the decisions that its leaders make. **Decisions based on fact** and not gut feel consistently lead to **better business performance**. Studies prove that companies who regularly make fact-based decisions have higher earnings growth than those that do not .

Business Intelligence (**BI**) **offers** the technological, theoretical, methodological framework which enables the data exploitation so as to provide organizations with **meaningful business insights**. But technology alone cannot build these solutions. Our Business Intelligence practice delivers solutions that inform smart decision-making.

We offer service and support in the following areas:

- Reporting Solutions
- Analytical Solutions
- Balanced Scorecards
- Executive Dashboards
- Mobile Business Intelligence Solutions
- Business Process Dimensional Models
- Data Warehouses
- Data Marts
- Data Acquisition (ETL) Solutions
- Financial Disclosure Management
- Financial Statement Reporting
- Business Intelligence Training

Corporate Performance Management

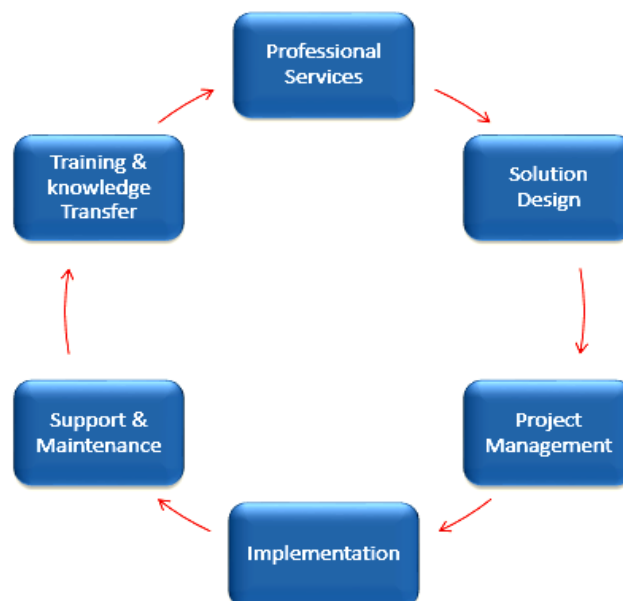

Corporate performance management (CPM) allows organizations to monitor and manage their organization's performance, according to key performance indicators (**KPIs**) such as revenue, return on investment (ROI), overhead, and operational costs. CPM software includes **forecasting, budgeting and planning** functions, as well as graphical scorecards and dashboards to display and deliver corporate information.

A company that executes a solid, but average strategy will outperform a company with a brilliant strategy that is poorly executed. Our Enterprise Planning practice helps companies do both—get everyone on the same page and the same team.

Our Business Analytics Consultants have been involved in sophisticated **Budgeting & Planning** as well as **Cash Flow Management** implementations across industries, at many firms, thus can demonstrate extensive experience .

We expertise in the process, not just the technology. Focus on the business issues and on the optimization of the process through the selected solution We offer service and support in the following areas:

- Revenue Planning
- Operational Expense Budgeting
- Cash Flow Planning
- Balance Sheet Budgeting
- P&L Budgeting
- Inventory Planning
- Asset Planning
- Capital Planning
- Enterprise Planning Training
